"Jonah Lehrer has a lot to offer the world....The book is interesting on nearly every page....Good writers make writing look easy, but what people like Lehrer do is not easy at all." —David Brooks, The New York Times Book Review Science writer Jonah Lehrer explores the mysterious subject of love. Weaving together scientific studies from clinical psychologists, longitudinal studies of health and happiness, historical accounts and literary depictions, child-rearing manuals, and the language of online dating sites, Jonah Lehrer's *A Book About Love* plumbs the most mysterious, most formative, most important impulse governing our lives. Love confuses and compels us—and it can destroy and define us. It has inspired our greatest poetry, defined our societies and our beliefs, and governs our biology. From the way infants attach to their parents, to the way we fall in love with another person, to the way some find a love for God or their pets, to the way we remember and mourn love after it ends, this book focuses on research that attempts, even in glancing ways, to deal with the long-term and the everyday. The most dangerous myth of love is that it's easy, that we fall into the feeling and then the feeling takes care of itself. While we can easily measure the dopamine that causes the initial feelings of "falling" in love, the partnerships and devotions that last decades or longer remain a mystery. This book is about that mystery. Love, Lehrer argues, is not built solely on

overwhelming passion, but, fascinatingly, on a set of skills to be cultivated over a lifetime. This collection establishes the term 'medical paratexts' as a useful addition to medical humanities, book history, and literary studies research. As a relatively new field of study, little critical attention has been paid to medical paratexts. We understand paratext as the apparatus of graphic communication: title pages, prefaces, illustrations, marginalia, and publishing details which act as mediators between text and reader. Discussing the development of medical paratexts across scribal, print and digital media, the collection spans the medieval period to the twenty-first century. *Dissecting the Page* is structured in two thematic sections, underpinned by a shared examination of ideas of medical and lay readership and a history of reader response. The first section focuses on the production, reception, and use of medical texts. The second section analyses the role and significance of authority, access, and dissemination in discussions of health, medicine, and illness, for both lay and medical readerships. Accused by a former girlfriend of being unable to emphathize, the narrator decides to write about the next person who walks into his life, Isabel Rogers *Dangerous Motherhood* is the first study of the close and complex relationship between mental disorder and childbirth. Exploring the relationship between women, their families and their doctors reveals how explanations for the onset of puerperal insanity were drawn from a broad set of moral, social and environmental frameworks, rather than being bound to ideas that women as a whole were likely to be vulnerable to mental illness. The horror of this devastating disorder which upturned the household, turned gentle mothers into disruptive and dangerous mad women, was magnified by it occurring at a time when it was anticipated that women would be most happy in the fulfillment of their role as mothers.

If you have ever wondered what the squiggles and strokes in a line of ink say about personality, or if you are a handwriting professional who learned the "trait-stroke" method, Reading Between the Lines, Decoding Handwriting, will introduce you to a new way to look at handwriting and understand personality. The gestalt method versus trait-stroke is the difference between viewing an object under a microscope that offers a very small field of vision, and a telescope that shows the bigger picture. One is not better than the other, they simply appeal to different thinking styles. Trait-stroke analysts are more comfortable with an atomistic step-by-step approach, building up a picture of personality one stroke at a time. Gestaltists are more conceptual thinkers who look at space, form, and movement, learning to recognize the whole personality at a glance.

what he had learned up to that point was relevant to his new studies. Professors had their own interests, and these they conveyed without regard for the math students of the future that these prospective secondary schoolteachers would one day instruct. Elementary Mathematics from an Advanced Standpoint was written to help remedy that problem. Though highly regarded as one of the finest mathematical minds of his day, Professor Klein took a great deal of interest in guiding teachers and "reducing the gap between the school and the university." Readers will come away impressed at the clarity of Klein's writing, and the ease with which he conveys complex mathematical ideas. Divided into three parts-arithmetic, algebra, and analysis-and covering such topics as complex numbers, real equations, and logarithmic and exponential functions, Klein's classic is essential reading for math instructors and students planning to become math instructors. German mathematician FELIX KLEIN (1849-1925), a great teacher and scientific thinker, significantly advanced the field of mathematical physics and made a number of profound discoveries in the field of geometry. His published works include Elementary Mathematics from an Advanced Standpoint: Geometry and Famous Problems of Elementary Geometry.

Love life of women and men during the middle years. Self-help during a midlife crisis. Handwriting is something of a dying art nowadays, as we tap messages to each other day after day. But handwriting analysis can divulge everything from a person's timidity to their ambition, from their desire to please to their need to control. In fact, so revealing is your writing that in Japan all CVs are still written by hand. This book shows you how to judge someone's handwriting as a whole and how to examine it in detail. Because every aspect of penmanship - the height of an 'h', the curliness of a 'g', the pressure of the pen on the paper - is a collection of signals that we are giving out without meaning to. The way we write can tell the world a huge amount; sometimes more than the things we write about. Our handwriting exposes how we interact with the world and the people around us, and also how we cope with stress and express emotions. It can help us
