Mental retardation has probably existed for as long as mankind has inhabited the earth. References to seemingly retarded persons appear in Greek and Roman literature. Examination of Egyptian mummies suggests that some may have suffered from diseases associated with mental retardation. Mohammed advocated feeding and housing those without reason. There is other evidence for favorable attitudes toward the retarded in early history, but attitudes varied from age to age and from country to country. The concept of remediation did not emerge until the nineteenth century. Earlier, in 1798, Itard published an account of his attempt to train the "wild boy of Aveyron." A rash of efforts to habilitate retarded persons followed. Training schools were developed in Europe and the United States in the 1800s; however, these early schools did not fulfill their promise, and by the end of the nineteenth century large, inhumane warehouses for retarded persons existed. The notion of habilitation through training had largely been abandoned and was not to reappear until after World War II.

Make introductory psychology modern and accessible! Strike a balance between classic and contemporary topics and theory. The new edition of this text engages students with local ideas and examples, within the context of psychology as an international discipline. Rich cultural and indigenous coverage is integrated throughout the text, as well as new chapters, 'Indigenous psychology', and 'Culture and psychology'. There is also the continued, and unique focus throughout the text on graduate attributes for accreditation, careers in psychology and the professional discipline of psychology. Linkages features in the text knit together student understanding of psychology's sub-disciplines, and the research sections show the how and why of research. World class learning technology available with Bernstein includes CourseMate Express, and a new MindTap.

New edition of the Hockenburys' text, which draws on their extensive teaching and writing experiences to speak directly to students who are new to psychology.

For every major content section, longtime author Richard Straub has divided each module by major topic; each section includes a Preview (objectives that require short answers) and "Stepping Through the Section" (which include detailed, fill-in-the-blank questions). The Study Guide also includes self-tests, critical-thinking exercises, vocabulary and language activities, Internet activities, and crossword puzzles.

The contingent relationship between actions and their consequences lies at the heart of Skinner's experimental analysis of behavior. Particular patterns of behavior emerge depending upon the contingencies established. Ferster and Skinner examined the effects of different schedules of reinforcement on behavior. An extraordinary work, Schedules of Reinforcement represents over 70,000 hours of research primarily with pigeons, though the principles have now been experimentally verified with many species including human beings. At first glance, the book appears to be an atlas of schedules. And so it is, the most exhaustive in existence. But it is also a reminder of the power of describing and explaining behavior through an analysis of measurable and manipulative behavior-environment relations without appealing to physiological mechanisms in the brain. As an exemplar and source for the further study of behavioral phenomena, the book illustrates the scientific philosophy that Skinner and Ferster adopted: that a science is best built from the ground up, from a firm foundation of facts that can eventually be summarized as scientific laws.

PSYCHOLOGY: MODULES FOR ACTIVE LEARNING is a best-selling text by renowned author and educator Dennis Coon and co-authors John O. Mitterer and Tanya Martini. This fourteenth edition continues to combine the highly effective SQ4R (Survey, Question, Read, Recite, Reflect, Review) active learning system, an engaging style, appealing visuals, and detailed coverage of core topics and cutting-edge research in one remarkable, comprehensive text. Fully updated, the new edition builds on the proven modular format and on the teaching and learning tools integrated throughout the text. While the text provides a broad overview of essential psychology topics ideal for introductory courses, its modular design also readily supports more specialized curricula, allowing instructors to use the self-contained instructional units in any combination and order. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Kaplan & Sadock's Study Guide and Self-Examination Review in Psychiatry is a comprehensive review of the specialty and perfect for stand-alone review or as preparation for the PRITE in-service, ABPN Part I, and recertification examinations. The book contains more than 1,600 multiple-choice questions and answers, with explanatory discussions of correct and incorrect responses. Chapters parallel the essential corresponding chapters in Kaplan & Sadock's Synopsis of Psychiatry, a staple of psychiatry education around the globe. Terms and definitions are consistent with DSM-IV-TR and ICD-10.

This 1988 book is a revealing historical record of the work of B. F. Skinner and its impact on psychology.

Study Guide to Substance Abuse Treatment is a question-and-answer companion that allows you to evaluate your mastery of the subject matter as you progress through The American Psychiatric Publishing Textbook of Substance Abuse Treatment, Fourth Edition. The Study Guide is made up of 292 questions divided into 49 individual quizzes of 4-9 questions each that correspond to chapters in the Textbook. Questions are followed by an Answer Guide that references relevant text (including the page number) in the Textbook to allow quick access to needed information. Each answer is accompanied by a discussion that not only addresses the correct response but also explains why other responses are not correct. The Study Guide's companion, the fourth edition of The American Psychiatric Publishing Textbook of

Substance Abuse Treatment has been fully updated to present the most current scientific and clinical information on a wide range of substance use disorders, from tobacco and alcohol to methamphetamine and "club drug" abuse. The text offers a comprehensive view of the basic science and psychology underlying addiction as well as extensive coverage of all treatment approaches and specialty topics. Highlights of this new edition include chapters on the biology and clinical management for each of the drug categories; new material on the role of buprenorphine in treating opioid addiction; extensive coverage of cognitive-behavioral therapy, motivational enhancement, and contingency management; and new research on the role of 12-step programs in addiction treatment.

The most affordable introductory psychology textbook in the market. Psychology: A Concise Introduction explores the broad territory of the introductory psychology course while answering the growing need for a shorter, less expensive book. At less than half the price of a standard textbook, it offers an affordable alternative. A built-in Study Guide, written by the author, offers a practical suite of learning aids that foster review and self-assessment without the expense of a separate guide.

Each chapter includes a review of key concepts, guided study questions, and section reviews that encourage students' active participation in the learning process; two practice tests and a challenge test help them assess their mastery of the material. Applications and observational activities are also included.

Via 100 entries, 21st Century Psychology: A Reference Handbook highlights the most important topics, issues, questions, and debates any student obtaining a degree in the field of psychology ought to have mastered for effectiveness in the 21st century. This two-volume reference resource, available both in print and online, provides an authoritative source to serve students' research needs with more detailed information than encyclopedia entries but without the jargon, detail, or density found in a typical journal article or a research handbook chapter. Students will find chapters contained within these volumes useful as aids toward starting research for papers, presentations, or a senior thesis, assisting in deciding on areas for elective coursework or directions for graduate studies, or orienting themselves toward potential career directions in psychology.

This study guide is an excellent aid in preparing for boards and other psychiatry exams and in reinforcing a students knowledge. It offers chapter overviews of "Synopsis, Tenth Edition" and more than 1,600 multiple-choice questions with discussions of correct and incorrect answers.

This revised and expanded second edition of Created to Learn—an ECPA Gold Medallion Award finalist—shows teachers how to organize and tailor classroom instruction to fit the learning styles of their students. In a real sense, author William R. Yount takes the theories of teaching and learning and brings them to life inside the classroom. Additional content in this updated edition includes: • More information on new research into learning theories, including discoveries in the field of neuroscience that provide far more detail about brain function. • New chapters on Constructivism and brain-based learning. • Updated research from Yount's teaching experiences in other countries. • Full rewrite of original text, condensing material that has moved into other books, removing data found to be less helpful, and adding research that provides support for evolving ideas about cognitive and humanistic learning theory systems, designing instructional objectives, and the revolution in brain science.

The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.
