Within the field of Evaluation, performance measurement is fast becoming a prevalent framework or set of tools to use in implementation analysis, formative and summative evaluations, and even needs assessments. Many of the measurement techniques that evaluators employ overlap with those of performance management, so evaluators are able to learn and use this framework quite readily. Recent approaches have acknowledged limitations in the implemented measurement systems and developed new practice-based strategies for effective ongoing measurement of program activities and use in guiding management. Significantly, these new strategies are being developed both in the United States and internationally and need to be brought together for collaborative learning and dissemination to practitioners and scholars. Julnes's text will serve as a vehicle for the dissemination of these new performance measurement strategies. The book will have a combination of conceptual and practical applications with an emphasis on cutting-edge practices in the US and abroad. The text boasts two unique features: first, though most of the chapters deal with performance measurement in the US., the text represents the most notable examples of performance measurement in Canada, Latin America, Europe and Eastern Europe; second, the book will be unique in the way that its structure will support the integration of theory and practice, with linked chapters that introduce the literature on key topics, present case studies with "lessons learned," and then provide clear guidance for practical "how-to/skill building."

In particular, AI techniques help construct portfolios based on more accurate risk and return forecasts and more complex constraints. Trading algorithms use AI to devise novel trading signals and execute trades with lower transaction costs. AI also improves risk modeling and forecasting by generating insights from new data sources. Finally, robo-advisors owe a large part of their success to AI techniques. Yet the use of AI can also create new risks and challenges, such as those resulting from model opacity, complexity, and reliance on data integrity.

Innovation Management: Strategies, Concepts and Tools for Growth and Profit is a unique book in the rapidly growing discipline of Innovation Management. It seeks to build on the experience from an earlier discipline—Competitive Strategy. It took more than two decades for practitioners to realize that successful strategy is driven by implementation, not by formulation. Similarly, successful innovation—the key to growth and profit—rests on disciplined management and implementation of the innovation process from start to finish. This book first answers the key questions: Why innovate? How to innovate? Who innovates? It then provides 10 essential and practical tools to help innovators guide their ideas to marketplace success. Following the publication of the successful first edition, and in response to many readers' positive feedback for its case studies, the second edition contains a large number of new mini case studies about innovative start-ups, businesses, and ideas in the period of 2007–12. Innovation Management shows how companies and individuals can transform creative ideas into powerful, sustainable, change-the-world businesses and emphasizes the crucial role of execution in implementing inspiring ideas.

This textbook, originally by D. Annand and H. Dauderis, was intended for a first course in introductory financial accounting. It focuses on core introductory financial accounting topics that match pre-requisite requirements for students advancing to Intermediate Financial Accounting. A corporate approach is utilized versus beginning with a sole proprietorship emphasis and then converting to a corporate approach; this consistency throughout the book reduces confusion for the introductory student. This most recent revision by D. Marchand converted the text from IFRS to reflect the Generally Accepted Accounting Principles of the United States (U.S. GAAP).

The dynamics of the asset management business are complex and geographically diverse. Products and vendors compete within and across markets and often shade into each other. Regulation can differ dramatically according to financial systems and functions. Here are discussed the major asset management sectors—pension funds, mutual funds, alternative investment vehicles, and private wealth management. Despite the complexity of the industry, common threads run through the discussion—growth, risk, and cost—that cannot be ignored by asset managers hoping to be sustainably profitable. What is required to excel includes distribution in leading markets, product breadth and consistency, global money management expertise, and capital strength. Also needed are technological capability, marketing and customer service skills, defensible pricing, low-cost production, and a strong brand. All these characteristics must be rooted in an affirmative culture with cohesive senior management and a talented and motivated staff.

Although there are countless books available on strategic management, there are few, if any, that supply practical coverage of strategic planning, execution, and measurement—until now. Considering the entire value chain, this book covers the complete process of strategic planning, execution, and measurement. Based on three decades of field-tested experience, Strategic Planning, Execution, and Measurement (SPEM): A Powerful Tool for CEOs provides both a consultant's view and an entrepreneurial approach to strategic planning, execution, and measurement. Walking you through the process, it begins by defining world-class status, visions, missions, business models, and value chains. Next, it discusses the two most important prerequisites of strategic planning and includes a questionnaire to help you evaluate operations, systems, and structure in your organization. The book provides a matrix of 25 parameters for assessing the status of your organization that can help to pinpoint the perceptual gaps between top executives and owners. It includes a strategy bank with 150 generic strategies in the five performance areas of business and identifies methods for monitoring strategy execution that provide early warning signals. It also introduces the Entrepreneurial Score Card, a tool for improving the impact of strategic planning and execution in your organization. Detailing the structure and preparation process for the strategic plan, the book illustrates the financial impact of strategy execution and explains the various financial monitoring parameters used in the performance cards of individual employees. It concludes by describing an entrepreneurial approach to strategic planning and with a comprehensive case study that illustrates the entire strategy formulation process and its conversion into an annual budget. This book is ideal for CEOs, CFOs, COOs, business owners, heads of business verticals, heads of corporate planning or strategy, functional heads, teachers, students, and practicing consultants in the area of strategic planning.
