The transition to adulthood is a complex process, and college is pivotal to this experience. The Science of College aids entering college students--and the people who support them--in navigating college successfully, with up-to-date recommendations based upon real student situations, sound social science research, and the collective experiences of faculty, lecturers, advisors, and student support staff. The stories captured in this book highlight how the challenges that college students encounter vary in important ways based on demographics and social backgrounds. Despite these varied backgrounds, all students are more likely to have successful college experiences if they invest in their communities. Universities have many resources available, but as this book will show, students need to learn when to access which resources and how best to engage with people serving students. This includes having a better awareness of the different roles held by university faculty and staff, and navigating who to go to for what, based upon understanding their distinct sets of expertise and approaches to support. There is no single template for student success. Yet, this book highlights common issues that many students face and provides science-based advice for how to navigate college. Each topic covered is geared towards the life stage that most college students are in: emerging adulthood. In addition to the student-focused chapters, the book includes appendixes with activities for students, tips for parents, and methods information for faculty. Supplemental website materials suggest classroom activities for instructors who adopt this book within first-year seminars and general education courses.

Includes Publications received in terms of Copyright act no. 9 of 1916.

This book provides an overview of science education policies, research and practices in mainland China, with specific examples of the most recent developments in these areas. It presents an insiders' report on the status of Chinese science education written primarily by native speakers with first-hand experiences inside the country. In addition, the book features multiple sectional commentaries by experts in the field that further connect these stories to the existing science education literature outside of China. This book informs the international community about the current status of Chinese science education reforms. It helps readers understand one of the largest science education systems in the world, which includes, according to the Programme for International Student Assessment, the best-performing economy in the world in science, math and reading: Shanghai, China. Readers gain insight into how science education in the rest of China compares to that in Shanghai; the ways Chinese science educators, teachers and students achieve what has been accomplished; what Chinese students and teachers actually do inside their classrooms; what educational policies have been helpful in promoting student learning; what lessons can be shared within the international science education community; and much more. This book appeals to science education researchers, comparative education researchers, science educators, graduate students, state science education leaders and officers in the international communities. It also helps Chinese students and faculty of science education discover effective ways to share their science education stories with the rest of the world.

Main author Ravi S. Iyer created the eklavyasai.blogspot.com blog and used it from September 2011 to play a part-time, peaceful and amicable, Indian Computer Science (CS) and Information Technology (IT) academic reform, Internet-based activist role. His focus was on improving the practice of software development in Indian CS & IT academia. But he thought that it is such a vital part of the CS & IT field and that it is so poor in many parts of Indian CS & IT academia, that he referred to his efforts as Indian CS & IT academic reform activism. Other contributors to the blog have given their views on certain topics. Main work period has been from 2011 to 2014 with a little work later, off & on. The main author is no longer active in this area. This book is aimed at helping other activists involved in improving the practice of software development in Indian CS and IT academia to get the views of the blog in a convenient form. The book may also be of interest to similar activists in other countries. About the author: Main author Ravi S. Iyer is a Physics graduate from Ruia college, University of Bombay (Mumbai) who was industry trained and later self-taught in software development. He worked in the international software industry (US, Europe, Japan, South Korea, India etc.) developing systems as well as applications software (CS & IT) for over 18 years after which he retired from commercial work. Later, mainly as a "visiting faculty", he offered free service of teaching programming courses (lab. courses) and being a "technical consultant" for student projects in a Maths & Computer Science department of a deemed university in India for 9 years.
