Creations of mind can vary in its form—from a brilliant thought to a gizmo gadget to a popular fiction—all come under the legal term called Intellectual Property. In the world of upheaval technology, where information on anything and everything is freely available and accessible, guarding these intellectual properties legally becomes a prerequisite. This book comprehensively discusses how to manage and secure the intellectual property and the legal norms associated with it. The book begins with introducing the concepts related to Intellectual Property and the WTO Agreement. The following chapters explain various types of Intellectual Property Rights such as Patents, Copyrights, Trade Marks, Industrial Designs, Integrated Circuits, and Geographical Indications. These chapters also provide in-depth and detailed insight on regulations and procedures for protection of Intellectual Property Rights. The book further explicates the creation of Intellectual Property and spells out the conceptual framework for creativity and innovation. Management of Intellectual Property is as important as its creation, and therefore the concluding chapters describe the activities for management and commercialization of Intellectual Property Rights, and the emerging issues surrounding them. Two separate cases have been added at the end of the book, to provide an analytical insight of the subject to the students. The book is meant for the undergraduate and postgraduate students of management and technology. Besides, the book can be useful for the undergraduate students of law as a ready reference.

More patent applications are rejected because of claim drafting flaws than because of problems with inventions. A trusted working tool for more than two decades, Faber on Mechanics of Patent Claim Drafting spotlights proven claim drafting practices and techniques that have been firmly established by patent authorities and custom. This lucid, time-saving handbook offers you: Start-to-finish directions for each type of claim apparatus or machine, method or process, composition of matter, article of manufacture, and biotechnology. Extensive discussion of nonart rejections, classic and more recent constructions of means clauses, inherent function of the apparatus doctrine, mental steps and computer programs, product-by-process claims, and claims referring to drawings. Quotations from litigated claims to help you see which types of limitations and phrases have (and have not) been judicially approved. Real-world examples of dependent claims, Jepson claims, generic and species claims, subcombination claims, and biotechnology. Numerous tips on how to avoid common claim drafting mistakes. Definitions and preferred usage of stylized words and phrases in patent law, such as comprising, consisting, means for, step for, and whereby. Guidance on how to review claims to eliminate errors and superfluous language. Faber on Mechanics of Patent Claim Drafting examines: Ways of avoiding transition words that can cause unnecessary claim interpretation problems. Claim terms that are incapable of interpretation and can render claims indefinite and invalid. Problematic alternative expressions. Practical issues involved in amending filed claims, claiming numerical ranges and amounts, and disclosing in a specification several alternatives of elements or embodiments of the invention. Faber on Mechanics of Patent Claim Drafting provides full coverage of U.S. Supreme Court and other court decisions critical to claim drafting. It is an indispensable guide for patent specialists and other intellectual property attorneys, corporate counsel, and non-specialists who represent inventors, patent officials, and inventors."

There are five parts to this book. Part I (Essentials) breaks down the bulky content of the MPEP 9th Edition into a simple and easy to remember format outlining the core U.S. patent law. I emphasize materials that frequently appear in officially published patent bar exams, and also AIA materials based on both MPEP and USPTO's frequently asked AIA questions. Each topic is itemized with bullet points accompanied by notes, examples and comparisons to enhance your learning experience. The MPEP chapters are not designed in a sequence conducive to learning. This book reorders them in a logical sequence starting with chapters 200, 600, 700, 2100, 800, 1200, 1400 and 1800. These are the key MPEP chapters for passing the patent bar exam. The remaining MPEP chapters mainly require memorization. Part II (Techniques) reveals techniques for passing the bar exam. Honing these techniques will save you time and avoid costly mistakes. As a few representative examples, techniques on Process of Elimination and Time Saving Tips on Exam Date will help you manage your exam time more efficiently; and techniques on Finding Key Words in Claim Drafting Questions will help you quickly discover if a dependent claim lacks antecedent basis, or is in the alternative way, or further limits the preceding claim, or is indefinite. Part III includes 50 curated questions from published bar exams focusing on all claims drafting issues. Claims are the most important part of the patent law. A considerable number of claim related questions appear in every patent bar exam, pre-AIA and post-AIA. Part IV includes 50 frequently asked AIA Q&A questions from the latest www.USPTO.gov. Part V includes 50 AIA multiple-choice questions that mimic the difficulties and the styles likely in a bar exam. This 5.5x8.5 travel size book, with over 400 pages and wide margins for writing your own notes, provides an effective learning experience for your patent bar exam. It is a summary of my own learning experience in passing the bar exam in March 2016 on the first attempt.

The book Visser's Annotated European Patent Convention is a commentary on the European Patent Convention and a bestseller in European patent law. Each year a new, updated edition of the book is published and available in paperback form. The 2019 edition of this preeminent work – the only regularly updated authoritative article-by-article commentary in English on the European Patent Convention (EPC), its implementing regulations, and associated case law – provides the complete text of the 2000 Convention annotated with commentary and expert guidance on the interpretation of each paragraph. Since its first edition in 1994 it has provided the European patent community with the necessary insights to practice successfully before the European Patent Office. The EPO recommends the Visser's Annotated European Patent Convention as the first book in its list of non-EPO/WIPO literature to be used for the preparation of the European qualifying examination. In addition to a thorough updating of developments, new material in this edition includes the following: New Rules of Procedure of the Boards of Appeal; New EPO Guidelines that enter into force on 01.11.2019; The references to Guidelines 2018 are kept for the eqe 2020 candidates.

It is a casebook on patent law that involves comparative jurisprudence tailored for India. The book is best described by highlighting the following features: (1) Casebook format - The casebook format suits practitioners and judges. It allows the reader to independently interpret and assess the implication of each caselaw, which forms a vital component of the practice of law. The reader is assisted towards this objective by only containing extracts of the relevant portions of the judgment. Even from an academic perspective, it provides an unfiltered view of the law, better than any unnecessary prose. (2) Comparative approach - For each topic of patent law, the book would provide a single point congregation of the relevant Indian provisions and extracts from relevant caselaw across India, the UK, the EU and the USA. This approach is ideal for India, where jurisprudence on the subject is limited. Courts, practitioners, and the Patent Office often resort to such a comparative approach to learn from the experiences of other jurisdictions. (3) Notes - Author's notes before and after each caselaw or topic fulfil four purposes: (i) set the context for the reader; (ii) critique the caselaw or to bring focus on to issues that arise in practice; (iii) contextualize the discussion to the Indian statute; and (iv) examine the historical perspective, including the legislative history. (4) Focus on law - it is a no-nonsense, no-rhetoric book, focussing on the law, its interpretation and application.

Invention Analysis and Claiming: A Patent Lawyer's Guide, Second Edition, presents a comprehensive approach to analyzing inventions and capturing them in a sophisticated set of patent claims. A central theme is the importance of using the problem-solution paradigm to identify the "inventive concept" before the claim-drafting begins. The book's teachings are grounded in "old school" principles of patent practice that, before now, have been learned only on the job from supervisors and mentors. Questions at the end of each chapter have been added to: Confirm the understanding of the principles presented; Explore the jurisprudential and practical implications of those principles; and Try out the invention analysis and claim drafting skills taught in the chapter." Patents are a key component of intellectual property and vital to the process of innovation. They serve multiple uses. One is to reward inventors and motivate them to create inventing for the betterment of society, inculcating a culture of innovation. Another is to protect inventors from getting their ideas stolen and profited from by unscrupulous people. In this book we introduce the laws related to patents and Intellectual property in India, as well as an overview of patenting and filing process. We also discuss some tips on how to make a good patent.

The U.S. patent system is in an accelerating race with human ingenuity and investments in innovation. In many respects the system has responded with admirable flexibility, but the strain of continual technological change and the greater importance ascribed to patents in a knowledge economy are exposing weaknesses including questionable patent quality, rising transaction costs, impediments to the dissemination of information through patents, and international inconsistencies. A panel including a mix of legal expertise, economists, technologists, and university and corporate officials recommends significant changes in the way the patent system operates. A Patent System for the 21st Century urges creation of a mechanism for post-grant challenges to newly issued patents, reinvigoration of the non-obviousness standard to quality for a patent, strengthening of the U.S. Patent and Trademark Office, simplified and less costly litigation, harmonization of the U.S., European, and Japanese examination process, and protection of some research from patent infringement liability.
