This report describes the Act and states the reasons for our conclusion that the Act should be repealed. It also contains the text of the Act, describes the survey conducted of members of the legal profession regarding their views on the Act, and summarizes the most frequently expressed reasons for retaining the Act, and states why it was concluded that those reasons were overborne by those in favour of repeal. Finally, it describes some approaches that could be taken to reforming rather than repealing the Act.

synecdoche [sih-NECK-doh-kee], noun. A figure of speech in which a part is used for the whole, as in the screen for movies. From Charlie Kaufman, perhaps the most distinctive screenwriting voice of our generation, comes a visual and philosophic adventure of epic proportions. Much as he did with his groundbreaking scripts for Being John Malkovich, Adaptation, and Eternal Sunshine of the Spotless Mind, Kaufman twists and subverts the form and language of film as he delves into the mind of a man who, obsessed with his own mortality, sets out to construct a massive artistic enterprise that could give some meaning to his life. Starring Philip Seymour Hoffman, Samantha Morton, Michelle Williams, Catherine Keener, Emily Watson, Dianne Wiest, Jennifer Jason Leigh, Hope Davis, and Tom Noonan, and directed by Kaufman, Synecdoche, New York is an epic story of grand artistic ambitions and creative madness. This Newmarket Shooting Script® Book includes: Exclusive introduction by Charlie Kaufman Complete Shooting Script Exclusive Q&A Color photo section Complete cast and crew credits

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.
